

The background of the image is a complex, abstract pattern of swirling, wavy lines. The colors are primarily deep blue and magenta, with some lighter blue and pink highlights. The lines flow and curve across the frame, creating a sense of motion and depth. The overall effect is reminiscent of a liquid or smoke-like texture.

Programming

a wild geek's saying

Programming

What is it?

Programming

What is it?

Let's find out!

Programming is the process of creating a set of instructions that a computer can understand and execute to achieve a specific goal. In other words, it is writing code that tells the computer what to do in a way that it can comprehend.

What programmers do?

Programmers are specialists in software development who deal with various tasks related to computer programming. In their work, programmers use different programming languages such as **PHP** to create web applications and IT solutions.

Front-end developers are responsible for creating Graphical User Interfaces (**GUIs**), which are the parts of applications that users see and interact with. Using HTML, CSS, and JavaScript, front-end developers design and implement user interface elements such as buttons, text fields, or navigation menus. Their goal is to ensure a user-friendly and aesthetically pleasing appearance of the application, as well as smooth and intuitive interaction with it.

On the other hand, **back-end** developers focus on working with the server and database, which handle the business logic and process data in the web application. In the PHP language, which is one of the popular back-end programming languages, developers create web services, manage user sessions, connect to databases, and process and transmit data between the client and the server.

In summary, programmers, using various tools and technologies, create both user-visible application interfaces (front-end) and behind-the-scenes systems and services (back-end) to ensure the efficient operation and user-friendliness of the software.

Assing words to their definitions!

1

Now let's play a game!

Assing words to their definitions!

PHP

1.

PHP is a protocol used
in computer networks.

2.

PHP is the name of a
computer virus.

3.

PHP is a programming
language for dynamic
web pages.

1

Now let's play a game!

Assing words to their definitions!

PHP

3.

PHP is a programming language for dynamic web pages.

Third answear was correct!

2

Now let's play a game!

Assing words to their definitions!

GUI

1.

GUI stands for:
General User Information

2.

GUI stands for:
Graphical User Interface

3.

GUI stands for:
Global User Index

2

Now let's play a game!

Assing words to their definitions!

GUI

2.

GUI stands for:
Graphical User Interface

**Second answer was
correct!**

3

Now let's play a game!

Assing words to their definitions!

Back-End

1.

GUI depends on it

2.

Web app design depends
on it

3.

Server-side of web app
depends on it

3

Now let's play a game!

Assing words to their definitions!

GUI

3.

Server-side of web app
depends on it

**Third answeare was
correct!**

Appreciate your attention
